

## Job Description

**Title:** Backend Developer

**Location:** Chennai

**Terms:** Full Time

**Experience:** 2 - 4 Years

**Industry Type:** Software Services & Solutions

### About Us:

Zealeye.AI Technology Solutions specializes in user experience design and mobile app development. We embrace our collective knowledge in design thinking, psychology, and software engineering to find creative solutions for real-world problems. Our team of experts has experience in developing and implementing RPA solutions that can automate wide range of UiPath and Blue Prism business process. We are specialized in AI, ML and software development. We are passionate about leveraging cutting – Edge technology to create innovative solution that transform business across various industries. Our team of experts has years of experience in developing software applications using the latest AI and ML techniques. We stand by our values every step of the way plain and simple. We believe that our clients success is our success. We're here to challenge our client's assumptions and help them discover their web or mobile applications full potential.

### Roles & Responsibilities:

As Backend Engineer passionate about building world-class mobile and web applications with performant backend and glitch-free experience. You will be part of a team which will be delivering technology that enhances the in-app experience for our users and enables our development teams to build mobile apps easier, faster and more efficient. You will build compelling and engaging applications for Web and Mobile platforms.

### What you'll do:

Employing your experience in latest NodeJS frameworks like Express.js, Hapi.js, Yarn, PM2, in building RESTful APIs, in integrating with databases like MongoDB and MySQL/Postgres, with discipline in collaboration and pair programming.

### Must Have Skills:

- Experience in NodeJS with express framework.
- Integration with SQL (MySQL, PostgreSQL) and NoSQL(MongoDB) Databases
- Using and understanding of npm/yarn packages like mongoose, Bcrypt, PM2, JWT etc.
- Proficiency in building Secure authentication and authorization systems
- Understanding of MVC model.
- Version Control System: GitHub
- Knowledge of AWS is a plus (S3, EC2)
